

barXprint

is part of the basic DMS series and ensures quick and easy printing barcode on forms of self-adhesive labels or single labels. barXprint like getXpdf offers an quick, on keyboard button, response with printing barcode with selected value from any windows application.

barXprint can also be used to upfront printing labels on A4/letter sheets of multiple self-adhesive labels in few easy steps like

- Select barcode technologies and type,
- Enter first label barcode value,
- Specify barcode header and footer value, height and width of labels, number of labels and rows,
- Print barcode labels.

Whether you need address labels for your small business or thousands of inventory labels for a your production, barXprint is right choice for you.

barXprint Editions

ALL PRINTERS

Printing is triggered with a single keyboard button click. barXprint works with all printers supported by Microsoft® Windows.

QUICK DATA

barXprint saves the entered data values of the last printing session automatically. Automatically barXprint will increase/decrease (depending on your barXprint settings) barcode value for next barcode print if no value is selected. This way you can quickly create small series of barcode just by clicking keyboard shortcut.

PRINTING MULTIPLE BARCODE LABELS ON SHEET

barXprint can also be used to upfront printing labels on A4/letter sheet of multiple self-adhesive labels in few easy steps:

- Select barcode technologies and type,
- enter first label barcode value,
- specify barcode header and footer value, height and width of labels, number of labels, ...
- print barcode labels.
